Fleetronix
Swift I Smart I Intelligent

Fleetronix

COMPANY OVERVIEW

About Us

Fleetronix is a progressive organization leveraging IoT-based and cloud-based technologies to excel in enterprise fleet administration, with a strong focus on operational visibility, security, and efficiency. At Fleetronix, our advanced tracking solutions empower businesses to navigate the complexities of modern logistics with ease.We understand that every business has unique operational requirements, and we provide customized technology-driven solutions to optimize fleet movement, cargo security, and operational control. With our dedicated vehicle tracking platform, businesses can monitor the real-time movement of their fleet, analyse performance data, and improve operational productivity. This isn't just a convenience—it's a gamechanger for modern logistics operations.

Beyond standard tracking, Fleetronix integrates multiple intelligent systems to enhance cargo safety, monitoring, and compliance. Our solutions include QR-based sealing systems for cargo integrity, NPR (Number Plate Recognition) camera integrations for automated vehicle identification, wagon tracking for rail logistics visibility, and video telematics for driver behaviour and safety monitoring.

We also provide AI-powered monitoring tools that identify operational risks through risky zone mapping, red zone alerts, and automated validation systems that detect irregular activities. Our AI-based alerts help businesses respond quickly to anomalies such as unauthorized stoppages, route deviations, tampering attempts, and security breaches. Through a combination of IoT devices, AI analytics, cloud infrastructure, and on-ground operational expertise, Fleetronix ensures that logistics operations are transparent, secure, and highly efficient across the entire supply chain.

Our USP

• At Fleetronix, visibility isn't just a service – it's our signature advantage.
• QR-based cargo sealing and validation systems ensuring tamper-proof logistics operations.
• NPR camera integrations for automated vehicle identification and entry-exit monitoring.
• Wagon tracking solutions providing real-time visibility in rail logistics.
• Video telematics and AI-based driver monitoring for improved safety and compliance.
• Risky zone and red zone mapping with intelligent alerts for operational security.
• AI-based detection and validation systems to identify anomalies and unauthorized activities.
• On-ground operational advisory and execution support for seamless implementation.
• Highly accurate IoT-based fleet monitoring solutions applicable across the entire fleet.

Compliance & Technical Response – Fleetronix

Dear Team,

Please find below our detailed responses to the compliance, hardware, integration, commercial, and operations queries:

1. Compliance & Regulatory

1. AIS-140 Certified Devices

Yes, we provide AIS-140 compliant solutions through our OEM partner.

Model Name: Bharat 101 (aQuila Bharat101)

2. ARAI / ICAT Approval Certificates

Yes, all devices are certified by ARAI / ICAT through our OEM partner. Certificates can be shared upon request.

3. TAC & COP Documents

Yes, valid TAC (Type Approval Certificate) and COP (Conformity of Production) documents are available via our OEM partner.

4. VAHAN Integration

Yes, the devices and platforms are compliant and can be integrated with VAHAN as per regulatory requirements.

5. State Transport Backend Integration

Yes, we support integration with state transport department backends.

2. Hardware Details

6. GPS Device Used

We work with **Itriangle OEM**, which provides AIS-140 certified GPS hardware along with all regulatory approvals.

7. Panic Button

Yes, supported as per AIS-140 norms through OEM devices.

8. Device Features

- Supports tamper alerts, backup battery, and SIM fallback/dual communication.

3. Integration Capabilities

9. Government Integrations

Yes, we support integration with the **Andhra Pradesh (AP) Transport Department** and Police Emergency Systems as per AIS-140 norms.

Fleetronix enables:

- Seamless integration between OEM devices and government systems
- Real-time data transmission to AP backend
- Compliance-ready architecture

10. System Capabilities

- IP + SMS gateway configuration
- Real-time alerts and notifications
- API-based integration with external systems

4. Commercial Details

11. Cost per Vehicle

Device + Installation + 1 Year Service: ₹XXXX – ₹XXXX per vehicle.

12. AMC Cost

₹XXXX per vehicle per year.

13. SLA for Device Downtime

12–24 hours resolution.

14. Replacement Timeline

24–72 hours.

5. Operations & Deployment

15. Installation Responsibility

Handled by trained field technicians.

16. On-Ground Support

Dedicated support team available for deployment and operations

17. Government Project Experience

Experience in large-scale fleet deployments and compliance-based integrations. Details can be shared upon request.
